Recombinant human MBP-calreticulin comprises the sequence of human calreticulin (see AAY92349) without the 17 N-terminal amino acids. A novel method of inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants). Fragments of calreticulin causes at least 40% inhibition of anglogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting anglogenesis in a patient. The anglogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental inmunune inflammation, antherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, macular suspensional production, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, macular sustain and suspension in the architecture and suspension architecture and suspension and su
                                                                                                                                                                                                                                                                                                                           Goodpasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's syndrome, sarcoidosis and primary biliary cirrhosis). The method also be used for treating/inhibiting tumor growth especially kaposi's sarcome (claimed).

                                                                                                 Fragments of caireficulin (or its fragments) variants).
Fragments of caireficulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasis, trachomu, noovascular glaucoma, psoriasis, angiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, reference theumatoid arthritis, systemic lupus erythromatosus, thyroiditis, syndrome, systemic lupus erythromatosus, thyroiditis, syndrome, surcoidosis and primary biliary cirrhosis). The method may when it is a second of treating tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MBP-culreticulin; maltose binding protein; angiogenesis; inhibition; endothelial call; anti-ungiogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-atheritic; ophthalmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Inhibiting endothelial cell growth and angiogenesis using calreticulin, useful for suppressing tumor growth

The invention relates to the use of a cClqR binding domain in a medicament to effect complement ubiquitin (CUB) functionality, and an inhibitor of the cClqR binding domain in a medicament to inhibit cub functionality. The cClqR binding domain, or its inhibitor; can be used to freat a human or animal body. Particularly an inhibitor is used to complement activation involved in the initiation and maintenance of inflammation, for example in mycocardial infarction, brain isohaemia (stroke), gut ischaemia, rheumatoid arthritis, systemic lupus erythematosus, burns, immune complex nephritis, and to treat amyloid plaques in Alzheimer's disease. The use of cClqR binding domain or inhibitor enables the CUB domain functionality to be modulated using a

A novel method of inhibiting endothelial cell growth comprises

Contacting the cells with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% Inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas, immmune of inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, adequated degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, rheumatoid arthritis, systemic lupus erythromatcosu, thyroiditis, goodpasture's syndrome, systemic lupus erythromatcosu, thyroiditis, syndrome, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially

Plea calreticulin protein PCtCall589 (AAW04171) is a calcium-binding protein found in the salivary glands of Ctenocephalides felis.

Its amino acid sequence was deduced from a cDNA clone (AAT19516) obtd. from a callvary gland cDNA library. Recombinant PCtCall589 can be produced in host cells transformed with a vector carrying calreticulin nucleic acids. Calreticulin alters the blood feeding behaviour of haematophagous insects and can be administered to an animal to reduce infestation. It reduces calreticulin activity in insects, so reducing the insect burden on an animal. Calreticulin can be used to elicit an immune response, thereby desensitising an animal to allergic dermatitis caused by fleas, mosquitoes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2 DAHGDSEYNIMFGPDICGPGTKKVHVIFNYKGKNVLINKDIRCKDDEFTHLYTLIVRPDN 61

It and a C-domain derived peptide (AAN06736) are useful for treating a patient to inhibit restenosis. The calreticulin-type cpds. are administered either parenterally, intravenously or via a catheter and can target areas of vascular damage
                                                                                                                       Gaps

```
A novel method of inhibiting endothelial cell growth comprises

contacting the cells with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% inhibition of angiogenesis,
tumor growth and/or endothelial cell growth (claimed). The method may be
used for inhibiting angiogenesis in a patient. The angiogenesis is
associated with a disease other than a tumor that is associated with
neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia,
trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune
convacularization, macular degeneration, corneal graft rejection,
contact lens overwear, orboh's disease, non-immune inflammation,
contact lens overwear, crohn's disease, non-immune inflammation,
cheumatoid arthritis, systemic lupus erythromatosus, thyroiditis,
cheumatoid arthritis, systemic vasculitis, scleroderma, Sjorgen's
syndrome, sarcoidosis and primary blilary cirrhosis). The method may
                                                                                                                                                                                                                                                                                         Inhibiting endothelial cell growth and angiogenesis using calreticulin, useful for suppressing tumor growth
                                                                                                                                                                                   (USSH ) US DEPT HEALTH & HUMAN SERVICES

The N-terminal is incomplete, however Abs which specifically bind to protein prepd. from induced cultures of lambda RAL-1 lysogens recognise a single polypeptide of mol. wt. 42.000 in extracts of adult worms. Analysis deduced sequence suggests that it encodes a protein of mol. wt. 39,130. If the suggests that it encodes a protein of mol. wt. 39,130. If the cutigen is not subject to post-translational processing this suggests that most of the coding sequence is present. The three repeats are highly hydrophilic regions likely to be exposed on the antigen expressed by the clone can be used stimulate T-cells of individuals infected by the parasite to proliferate and may be used as the basis for a vaccine against Onchocerciasis or river
                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding Onchocerca volvulos antigen - used to express recombinant antigen for vaccine against onchocerciasis or river
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence was deduced from a cDNA clone lambda RAL-1 prepd

                                                                                                                                                                   contacting the cells with calreticulin (or its fragments/variants).

Contacting the cells with calreticulin (or its fragments/variants).

Cragments of calreticulin causes at least 40% inhibition of analogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis of the analogenesis is associated with a disease other than a tumor that is associated with necvascular glaucoma, paoriasis, angiofibromas, immune of inflammation, atherosciarosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, contact lens overwear, crohn's disease, non-immune inflammation, contact lens overwear, systemic lauge rythromatosus, thyroiditis, Goodpanture's syndrome, systemic lumps erythromatosus, thyroiditis, syndrome, surcoidosis and primary billiary cirrhosis). The method may also a labo be used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                Inhibiting endothelial call growth and angiogenesis using calreticulin, useful for suppressing tumor growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MBP-calreticulin; maltose binding protein; angiogenesis; inhibition; endothelial cell; anti-angiogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.

This sequence comprises recombinant human calreticulin (AAY92350)
missing the N-terminal 120 amino acids.
A novel method of inhibiting endothelial cell growth comprises
contacting the cells with calreticulin (or its fragments/variants).
Fragments of calreticulin causes at least 40% inhibition of
anjiogenesis, tumor growth and/or endothelial cell growth (claimed). The
method may be used for inhibiting angliogenesis in a patient. The
anglogenesis is associated with a disease other than a tumor that is
method may be used for inhibiting angliogenesis, in a patient. The
associated with neovascularization (e.g. diabetic neuropathy, retrolental
fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas,
immune inflammation, atherosclerosis, excessive wound repair, retinal
neovascularization, adecuar degeneration, corneal graft rejection,
contact lens overwear, Crohn's disease, non-immune inflammation,
cheumatoid arthritis, systemic lupus erythromatosus, thyroiditis,
syndrome, sarcoldosis and primary biliary cirrhosis). The method may
also be used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid molecules encoding a calcium binding chaperone protein in endoplasmic reticulum, calreticulin, and calreticulin promoter sequences, useful for producing foreign gene products in plant cells .
cell growth and anglogenesis using calreticulin, tumor growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Castor bean; calreticulin; calcium binding; er; endoplasmic reticulum;

                           The present invention provides the protein and coding sequences for the castor bean calreticulin protein and the calreticulin promoter sequence. In addition, the castor bean calnexin protein, coding sequence and promoter are also described. Calreticulin and calnexin are calcium binding proteins found in the endoplasmic reticulum (er). The calreticulin promoter sequence can be used in vectors to promote the expression of foreign genes, particularly resistance genes, in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences for the castor bean calreticulin protein and the calreticulin promoter sequence. In addition, the castor bean calnexin protein, coding sequence and promoter are also described. Calreticulin and calnexin are calcium binding proteins found in the endoplasmic reticulum (er). The calreticulin promoter sequence can be used in vectors to promote the expression of foreign genes, particularly resistance genes, in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecules encoding a calcium binding chaperone protein in endoplasmic reticulum, calreticulin, and calreticulin promoter sequences, useful for producing foreign gene products in plant cells -

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 7, Algorian Sequence 7, Algorian Sequence 4, Algorian Sequence 28, Sequence 28, Sequence 2, Algorian Sequ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 6, Application US/08675816

Patent No. 6171864

GENERAL INFORMATION

APPLICANT: COUGHAIN, Sean J.

APPLICANT: Winfrey, Jr., Ron J.

TITLE OF INVENTION: CALRETICULIN AND CALNEXIN GENES AND PROMOTER REGIONS AND USES

TITLE OF SEQUENCES: 16

CORRESPONDENCE ADDRESS:

ADDRESSEE: Seed and Berry

STREET: 701 Fifth Ave. Suite 6300

CITY: Seattle

STRATE: Washington

CITY: Seattle

STATE: Washington

COUNTEY: US.A.

ZIP: 98104-7092

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible
                                                                                                                                        GENERAL INFORMATION:
APPLICANT: Bergeron, John J.M.
APPLICANT: Thomas, David Y.
APPLICANT: Thomas, David Y.
APPLICANT: Wade, INTERPRETED BY THE OF TITLE OF INVENTION: METHODS OF DETECTION AND TREATMENT OF TITLE OF INVENTION: PROTEIN TRAFFICKING DISORDERS AND INCREASING SECRETORY TITLE OF INVENTION: PROTEIN PRODUCTION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10;
